

***Health Study Guide for Poisoning***

***NAME:***

1) The Definition of Poisoning is:

2) List and Explain the four ways to get a poison into your body: (know the scientific term, and the laymen's term, or simple term.)

3) The most important part of the unit is Preventing Poisoning; Share and List as many ways to prevent poisoning as you can think of.

4) What does dilute the poison mean? What's the best thing to use to do this?

5) When babysitting, and you are presented with a situation involving a sick child. How will you determine "IF" this child has been poisoned, or if they are just getting the flu? In other words, what is the FIRST THING YOU HAVE TO DO?

6) The First thing you should do, ONCE you've determined you have a poisoning situation, is to... ?

7) What information would be helpful to give them? (we're assuming you got #6 right)

8) What advice would you give homeowners and family's about potentially poisonous plants?

9) What is the main reason for keeping your poisoning victim calm and comfortable?? Be specific in getting to the main point!!!! (has to do with the circulation of the blood stream in your victim)
